

The National Council for Suicide Prevention is a national coalition of six leading nonprofits working to end suicide in the United States.

U.S. Suicide Deaths by Day of Week and Race/Ethnicity, 1999-2024

About the Data

The following tables present counts of suicide deaths among U.S. residents by day of week and race/ethnicity from 1999 through 2024. Data are derived from the CDC's National Vital Statistics System (NVSS) and accessed through CDC WONDER.

Figures reflect deaths classified as suicide under ICD-10 codes U03, X60–X84, and Y87.0. Rankings are based on average deaths per occurrence of each weekday within a year (e.g., Monday deaths divided by the number of Mondays in that year).

Values shown are counts, not population-adjusted rates. Race and ethnicity categories reflect CDC classification standards in effect during the reporting years.

For optimal viewing, open the PDF in full-screen mode or zoom to 150%.

NOTES

These tables summarize U.S. resident suicide deaths by day of week and race/ethnicity, 1999–2024. Suicides are identified using ICD-10 underlying-cause codes U03, X60–X84, and Y87.0. Day of week is based on the recorded date of death on the death certificate; for some cases, this may reflect the time of pronouncement or discovery rather than the exact time of death. Values are counts, not rates (i.e., not adjusted for population size or age).

Definitions:

- # = number of deaths occurring on that day of week
- AVG = average deaths per occurrence of that weekday (e.g., Monday deaths ÷ number of Mondays in the year; most weekdays occur 52 times, some 53 depending on the calendar and leap years)
- Rank = within year rank of the weekday's per-occurrence average (1 = highest)
- TOTAL # = sum across the seven weekdays for known day of week; this may differ from annual totals if some deaths have unknown day of week (i.e., Unknown DOW)
- TOTAL AVG = annual daily average (TOTAL # ÷ 365 or 366)
- For the All Years row, TOTAL AVG is calculated as the total deaths across the included years divided by the total number of days in those years

Race/ethnicity classification: For 1999–2017, CDC WONDER uses bridged-race classification to assign decedents to one of four single-race groups: White, Black or African American, American Indian or Alaska Native, Asian or Pacific Islander. Under this bridged-race methodology, multiracial decedents are redistributed into single-race categories and are not separately identified.

Beginning in 2018, single-race categories follow the 1997 OMB standards: American Indian or Alaska Native; Asian; Black or African American; Native Hawaiian or Other Pacific Islander; White; and More than one race. The category “More than one race” is available beginning in 2018 and was not separately reported in bridged-race data for 1999–2017.

Where shown as Asian/Pacific Islander, the Asian and Native Hawaiian or Other Pacific Islander races are combined to maintain comparability with bridged-race structure and reduce small cell instability. Race is combined with Hispanic origin to form mutually exclusive race/ethnicity groups as labeled.
